PERSONAL PROFILE

Multiplatform application developer (DAM) with hands-on experience designing and deploying solutions on AWS, currently studying for a BSc (Hons) in Cyber Security at York St John University. Comfortable with Java, SQL, Python and cloud infrastructure, with a strong interest in cloud security architecture. Looking for a part-time role as a Junior Developer / IT Support / Cloud Support Associate where I can contribute to secure, reliable systems. Reliable, customer-focused and used to working independently.

TECHNICAL SKILLS

Programming: Java, Python, TypeScript

Cloud (AWS): EC2, S3, VPC, IAM, Lambda, RDS, CloudFormation, CloudWatch, Amazon Bedrock

Development: REST APIs, Git, Docker

Databases: MySQL, PostgreSQL, SQLite, DynamoDB

Security & Systems: Linux, networking fundamentals (TCP/IP, DNS), IAM least privilege, encryption at rest/in transit

Tools: Antigravity IDE, Android Studio, Postman

PROJECTS

Armario: AI-Powered Wardrobe App | *Personal project, 2026*

TypeScript · React 19 · AWS (Lambda, DynamoDB, S3, Cognito, API Gateway, EventBridge, CloudFront) · Amazon Bedrock (Claude, Stability AI) · AWS CDK · Vitest

An installable web app that turns phone photos into a digital wardrobe, with AI tagging, an outfit composer and daily outfit suggestions.

- **Designed and built** a serverless PWA on AWS, defined as infrastructure as code in 4 CDK stacks, 7 Lambda functions and 13 authenticated API endpoints.
- **Implemented** an event-driven image pipeline that removes photo backgrounds and classifies garments with Claude, checking every AI response against a shared Zod schema.
- **Built** an outfit recommendation engine that combines wardrobe data, wear history, user feedback and live weather.
- **Delivered** 534 automated tests using test-driven development, and secured the app with Cognito, JWT-based user isolation and private encrypted storage.

MyNotes: personal study-management PWA | *Personal project, 2026*

TypeScript, React, Hono, AWS (CDK, Lambda, DynamoDB, Cognito, S3, CloudFront)

A personal study-management PWA that brings a student's notes, files, calendar deadlines, Pomodoro study sessions and spaced-repetition flashcards into one app, so nothing gets lost or missed.

- **Designed and built** a serverless study-management PWA on AWS, deployed over HTTPS on a custom domain via six CDK stacks. It covers notes, file uploads, a calendar, a Pomodoro timer and FSRS flashcard revision.
- **Implemented** a 29-endpoint Hono-on-Lambda API with Cognito JWT authorisation, per-user data isolation and server-side Zod validation. Uploads use presigned S3 POST policies with size limits, and markdown is sanitised.
- **Built** scheduling and study-time data server-authoritative, so clients cannot forge session durations or flashcard review state. Added offline reading with Workbox caching.
- **Delivered** 286 automated tests (Vitest, Testing Library) covering access control, forged-input and regression cases across a four-package pnpm monorepo.

WORK EXPERIENCE

Software Developer Intern / Work Placement (FCT) 02/26 – 06/26

Hospital Universitario Son Espases, Palma, Spain

- Developed a web-based prompt library enabling clinical staff to find and reuse approved generative AI prompts for medical use, organised by category.
- Implemented role-based access control (RBAC) with a hierarchy of 5 roles, restricting who could create, review, approve and use prompts.
- Built a request queue and approval workflow, so every new prompt was reviewed before being published to clinical users.
- Automated daily review notifications with a scheduled cron job that emailed reviewers their pending requests.

EDUCATION

BSc (Hons) Cyber Security 2026 – 2027

York St John University, York

- Relevant modules: Network Security, Secure Programming, Digital Forensics, Cloud Security.

Higher Technician in Multiplatform Application Development (DAM) 2024 – 2026

Sant Josep Obrer, Palma, Spain – Spanish Level 5 qualification, comparable to a UK HND

- Covered: Object-oriented programming, Databases, Mobile development, Interfaces, Business systems.

CERTIFICATIONS

AWS Solutions Architect (Associate) – Currently Studying

LANGUAGES

Spanish – Native

English – Fluent / Professional working proficiency

ADDITIONAL INFORMATION

Right to work: Student visa, up to 20 hours/week in term time, full time during vacations
